

Made Right When You Need It, Driven To Be Better

004010 & 004011 Vs Newly designed **Newton Formed Rack**

Raw material and fuel surcharges have seen a steady rise over the last few years. Newton is aware of how these increases may effect you and/or your end customer. Our motto is “*Driven to Be Better*”, as such, Newton has designed and engineered a new cost-effective option for your consideration. The **NFR (Newton Formed Rack)** replicates all of the **004010** and **004011** series of steel equipment racks.

The New NFR is form fit and functionally equivalent to the **004010 / 004011**. You can reference the drawings below to see the differences between the two racks. Since the NFR is a formed rack, not extruded, material cost is simply lower, allowing Newton to transfer the cost savings to you.

The **004010 / 004011** racks are still available and have not been replaced. Please consult your CSR for pricing on this series of racks.

Static load tested to **1200 lbs.** with evenly distributed weight.
