Product Announcment 1

Adjustable Bolt-Together Frame 222343xxxx

- **Ships like this**

- **Unpacks like this**

- **Assembles like this**

Innovative Design

1. ***Simple design.....*** Compatible with Newton Vertical cable managers (NSCM series) Mounting holes to attach four sizes of cable rack to the top. Cable management access in top and base.
2. ***Easy to assemble....***Once unpacked, this frame will typically take about an hour to assemble. All of the bolts are a carriage bolt style, allowing assembly by one person and giving the added benefit of a self squaring feature.
3. ***Packaging.....***The deepest server frame is an impressive 24W x 42D x 84H when assembled but when shipped, the box is less than 85" x 16" x 3" and can be shipped by most major carriers without a pallet.
4. ***Cost effective.....***Bolt together design reduces part count and cost. Flat pack container drastically cuts shipping costs.
5. ***Flexibility...*** Equipment mounting uprights designed to accept cage nuts in various sizes. Frame is easily converted from 19" to 23" width.
6. ***Custom Applications....***If this is not an exact match of what you are looking for, Newton can custom design a server frame to your requirements. All we need is a small *minimum purchase* and we can *customize* the frame for height, depth, mounting hole spacing, color etc….just call and ask !

Note:
- Frame must be anchored to the floor for toploading stability.
- Mounting hardware options must be ordered separately
