

Connecting & Support

Support Leg

Support Leg
connects to the floor
and **Vertical Post** to
add strength to larger
cages.

Newton P/N	Crossguard P/N	Description
2229170048	CB-SL-AU	Support Leg

The support leg is used to provide additional strength to the overall structure on larger cage configurations. It is connected to the floor and any applicable vertical post as needed.

Brackets

Universal Fixing Bracket
is used to
attach the Horizontal
Post to the top of the
Vertical Post.

Floor Fixing Bracket
is used to
attach the Vertical
Post to the floor.

Newton P/N	Crossguard P/N	Description
2229070011	FFB-AU	Fixing Bracket
2229100011	UFB-AU	Universal Fixing Bracket

The Universal Fixing Bracket (UFB) connects horizontal post to vertical post in a 90° angle or in a straight connection along an elongated wall.

The Foot Fixing Bracket (FFB) is used to attach a vertical post to the floor.

The UFB and FFB can be used together to join one post to another vertically, if the cage height is higher than the standard 8' with additional hardware.

Panel Fixing Angle
allows for custom
cage configurations.

Angles

Newton P/N	Crossguard P/N	Description	Height (Nominal)
2229230048	PFA-A1	Panel Fixing Angle	8' 0"
2229230148	PFA-A2	Panel Fixing Angle	7' 6"

Standard panel sizes will not always fit exactly into the desired overall dimension of some custom cage configurations. (For example – in a more rectangular configuration.) In this case the cage panel will have to be shortened to the required width. The panel fixing angle (2 required) allows the cut panel edge to be covered to protect against any sharp edges and also fixes it to the vertical post.

Vertical Post Splice

Vertical Post Splice
is used to attach an
extension post to an
existing vertical.

Newton P/N	Crossguard P/N	Description
2229800048	--	Vertical Post Splice

The Vertical Post Splice is a connecting support between vertical posts. The slots located on the bottom section of the splice make construction easier by allowing the vertical post splice to rest on the existing lower post's assembly bolts while attaching the upper vertical post.

Stabilizers & Reinforcement

**NEW**

Joint Stabilizer

Newton P/N	Crossguard P/N	Description
2229120148	JS-610-AU	Joint Stabilizer

The joint stabilizer can be deployed over horizontal to horizontal post junctions to give covered joints additional strength.

NEW

Corner Stabilizer

Newton P/N	Crossguard P/N	Description
2230240048	--	Corner Joint Stabilizer

The Corner stabilizer can be deployed over corner junctions to give the joints additional strength.

NEW

Tee Junction Kit

Newton P/N	Crossguard P/N	Description
2230140048	--	Cage "Tee" Junction Kit

The Tee Junction Kit can be deployed over horizontal to horizontal post junctions to give the joints additional strength.

NEW

Cross Junction Kit

Newton P/N	Crossguard P/N	Description
2230100048	--	Cross Junction Kit

The Cross Junction Kit can be deployed over horizontal to horizontal post junctions to give the joints additional strength.

Joint Stabilizer adds additional strength to junctions.

Corner Stabilizer adds additional strength to corner sections.

Tee Junction Kit adds additional strength to junctions.

Cross Junction Kit adds additional strength to junctions.
